- O. Remote Call Forwarding - Remote Call Forwarding (RCF) is a local exchange telecommunications service feature whereby all calls dialed to a telephone number equipped for RCF are automatically forwarded to another dialable exchange or 8XX Service telephone number. Remote Call Forwarding service is offered subject to availability of suitable facilities. Remote Call Forwarding service is not offered where the terminating station is a coin telephone. **SECTION 4 – RATES AND CHARGES****4.1 Application of Rates and Charges**

All services offered in this tariff are subject to Service Order, Nonrecurring, Monthly Recurring, and Usage Charges.

**4.1.1 Call Timing for Usage Sensitive Services**

Where charges for a service are specified based on the duration of use, such as the duration of a telephone call, the following rules apply:

- A. Calls are measured in durational increments identified for each service. All calls which are fractions of a measurement increment are rounded-up to the next whole unit.
- B. Timing on completed calls begins when the call is answered by the called party. Answering is determined by hardware answer supervision in all cases where this signaling is provided by the terminating local carrier and any intermediate carrier(s).
- C. Timing terminates on all calls when the calling party hangs up or the Company's network receives an off-hook signal from the terminating carrier.
- D. Calls originating in one time period and terminating in another will be billed in proportion to the rates in effect during different segments of the call.
- E. All times refer to local time.

## SECTION 4 - RATES AND CHARGES (CONT'D.)

## 4.1 Application of Rates and Charges (Cont'd.)

## 4.1.2 Distance Calculations

Where charges for a service are specified based upon distance, the following rules apply:

A. Distance between two points is measured as airline distance between the rate centers of the originating and terminating telephone lines. The rate center is a set of geographic coordinates, as referenced in Local Exchange Routing Guide, associated with each NPA-NXX combination.

B. The airline distance between any two rate centers is determined as follows:

Step 1: Obtain the "V" (vertical) and "H" (horizontal) coordinates for each Rate Center from the above-referenced BellCore document.

Step 2: Compute the difference between the "V" coordinates of the two rate centers; and the difference between the two "H" coordinates.

Step 3: Square each difference obtained in step (b) above.

Step 4: Add the square of the "V" difference and the square of the "H" difference obtained in step C) above.

Step 5: Divide the sum of the squares by 10. Round to the next higher whole number if any fraction is obtained.

Step 6: Obtain the square root of the whole number result obtained above. Round to the next higher whole number if any fraction is obtained. This is the airline mileage.

C. The formula for distance calculations is:

Formula:

$$\sqrt{\frac{(V_1 - V_2)^2 + (H_1 - H_2)^2}{10}}$$

**SECTION 6 - GRANDFATHERED SERVICES (CONT'D.)****6.10 Spectrum Plus Service (Cont'd.)****B. Calling Features (Cont'd.)**

Customers subscribing to Spectrum Plus Service may also subscribe to the following Calling Features:

**Call Forwarding - Call Forwarding**, when activated, redirects attempted terminating calls to another Customer-specific line. The Customer may have to activate and deactivate the forwarding function and specify the desired terminating telephone number during each activation procedure. Call originating ability is not affected by Call Forwarding. The calling party is billed for the call to the called number. If the forwarded leg of the call is chargeable, the Customer with the Call Forwarding is billed for the forwarded leg of the call. Calls cannot be transferred to an International Direct Distance Dialing number.

**Call Forwarding -Busy - Permanently** routes incoming calls to a predetermined telephone number when the called line is busy.

**Call Forwarding - No Answer - Permanently** routes incoming calls to a specified number, selected by the Customer, when the called line is unanswered.

**Speed Calling - This feature** allows a user to dial selected numbers by means of an abbreviated code. This feature is available in an 8 number capacity. The Speed Calling list can only accommodate a number consisting of 15 digits or less.

**Caller ID - Allows a Customer** to see a caller's telephone number previewed on a display screen before the call is answered allowing a Customer to prioritize and or screen incoming calls. Caller ID records the number, date and time of each incoming call - including calls that aren't answered by the Customer. Caller ID service requires the use of specialized CPE not provided by the company. It is the responsibility of the Customer to provide the necessary CPE.

**Call Waiting - Call Waiting** provides a tone signal to indicate to a Customer already engaged in a telephone call that a second caller is attempting to dial in. This feature permits the Customer to place the first call on hold, answer the second call and then alternate between both callers.

**Cancel Call Waiting (CCW)** allows a Call Waiting (CW) Customer to disable CW for the duration of an outgoing telephone call. CCW is activated (i.e., CW is disabled) by dialing a special code prior to placing a call, and is automatically deactivated when the Customer disconnects from the call. Customers must actively choose this feature on a line-by-line basis. Call Waiting is not available on lines enabled for Rotary Hunting.
